

**Motivation**

- ❖ The Information system designed for an organization must meet the requirements of the end users of the organization.
- ❖ To obtain what an end user expects from the Information System the designer must gain complete knowledge of the organization's working.
- ❖ It is important for the student to know the information gathering techniques so that no information is overlooked and the nature and functions of an organization are clearly understood
- ❖ The main purpose of gathering information is to determine the information requirements of an organization.
- ❖ Information requirements are often not stated precisely by management.
- ❖ Analyst's responsibility to prepare a precise Systems Requirement Specifications understood (SRS) by users.
- ❖ SRS document is a vital document before starting a project.
