O	0,3	0,3

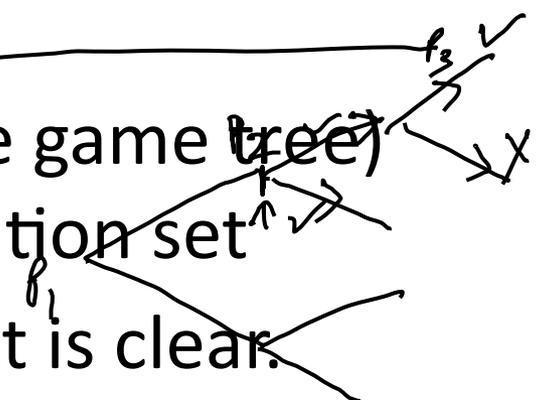

# Subgame

- A subgame in an extensive-form game
  - ✓ – begins at some decision node, say  $A$ , with a singleton information set
  - ✓ – includes all the successor nodes [decision and terminal nodes] of  $A$
  - ✓ – If includes one node from an information set, then includes all the nodes of that information set.

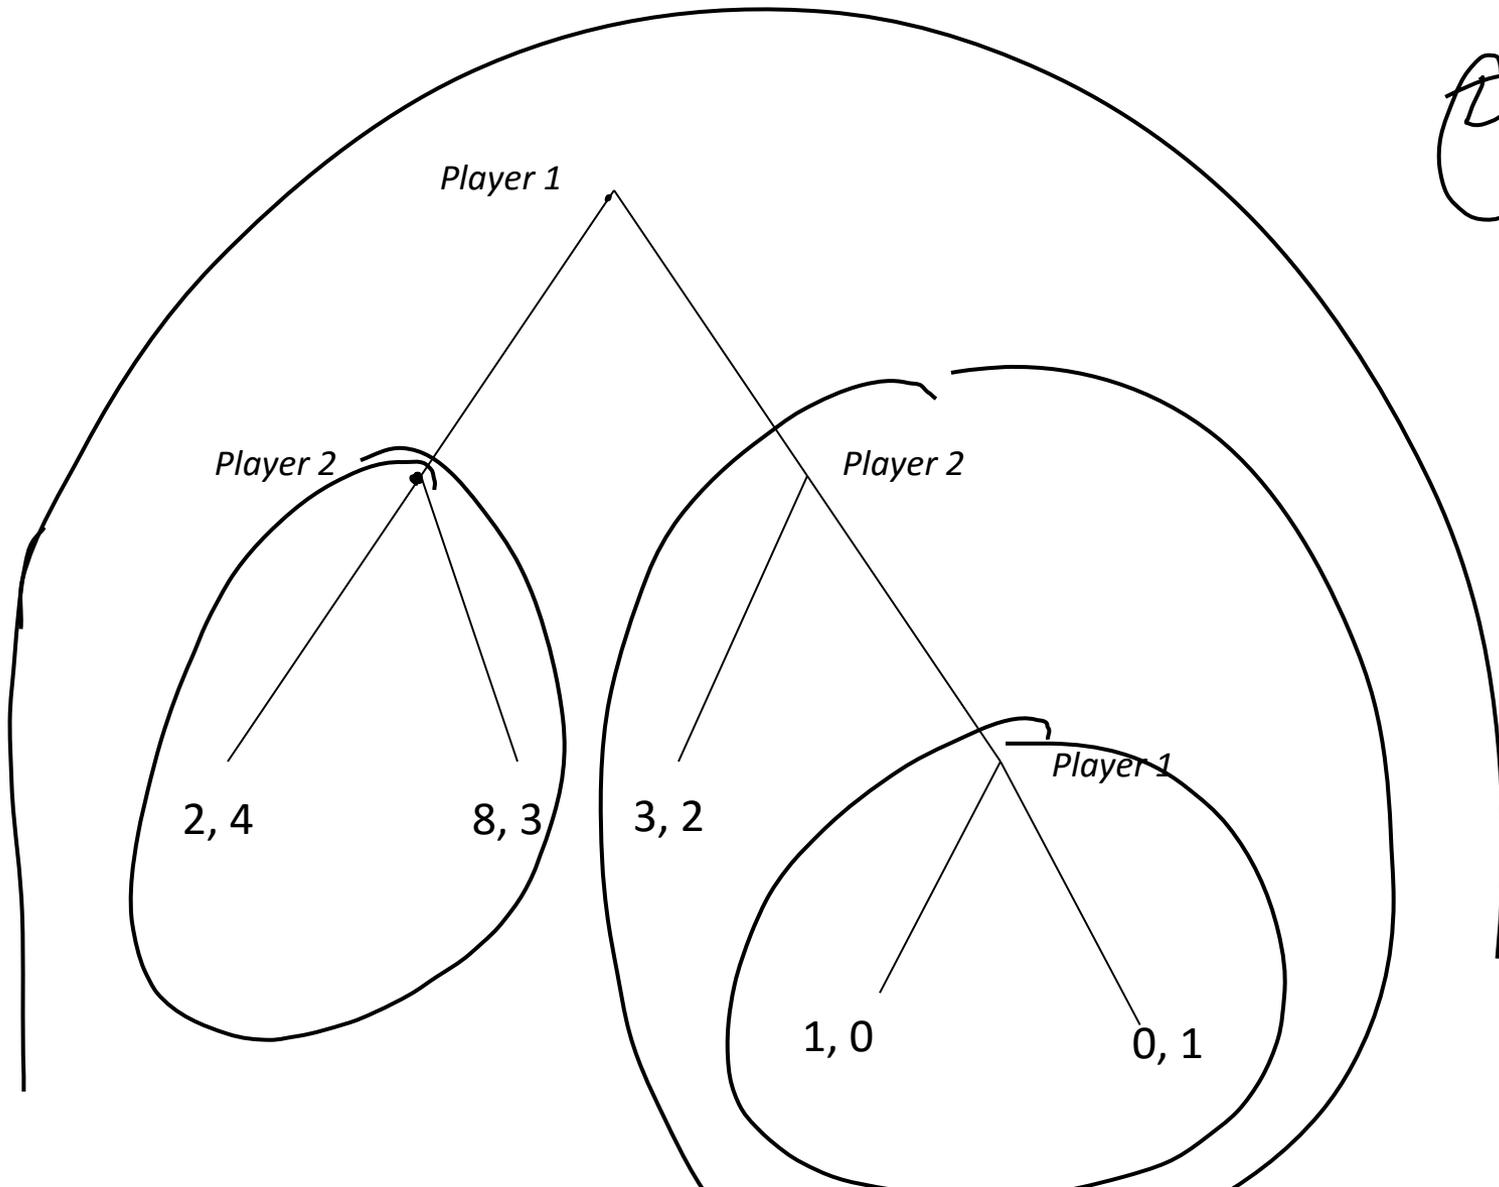

~~• Proper subgame = subtree (of the game tree) whose root is alone in its information set~~

~~• Notion of movement: whenever it is clear.~~
