## Lecture 5: Elementary Number Theory

**Instructor: Sourav Chakraborty**

## Some Number Theory Notations

If  $a, b$  are two positive integers then  $b$  divides  $a$  if  $a = bq$  for some positive integer  $q$ .

It is denoted as  $b \mid a$ .

## Some Number Theory Notations

If  $a, b$  are two positive integers then  $b$  divides  $a$  if  $a = bq$  for some positive integer  $q$ .

It is denoted as  $b \mid a$ .

If  $a$  does not divide  $b$  then it is denoted as  $a \nmid b$ .

## Exercise

Prove that the relation “ $a$  divides  $b$ ” is a reflexive and Transitive relation in the set of positive integers.

Also show that the relation is no symmetric.

# Number Theory Observations: 1

If  $a, b, p$  are three positive integers such that  $a$  and  $b$  are divisible by  $p$  then prove that  $p$  divides  $a + b$ .

# Number Theory Observations: 1

If  $a, b, p$  are three positive integers such that  $a$  and  $b$  are divisible by  $p$  then prove that  $p$  divides  $a + b$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .

# Number Theory Observations: 1

If  $a, b, p$  are three positive integers such that  $a$  and  $b$  are divisible by  $p$  then prove that  $p$  divides  $a + b$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .
- Similarly  $p$  divides  $b$  implies  $b = ps$ , for some positive integer  $s$ .

# Number Theory Observations: 1

If  $a, b, p$  are three positive integers such that  $a$  and  $b$  are divisible by  $p$  then prove that  $p$  divides  $a + b$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .
- Similarly  $p$  divides  $b$  implies  $b = ps$ , for some positive integer  $s$ .
- So  $a + b = pr + ps$

# Number Theory Observations: 1

If  $a, b, p$  are three positive integers such that  $a$  and  $b$  are divisible by  $p$  then prove that  $p$  divides  $a + b$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .
- Similarly  $p$  divides  $b$  implies  $b = ps$ , for some positive integer  $s$ .
- So  $a + b = pr + ps = p(r + s)$ .

# Number Theory Observations: 1

If  $a, b, p$  are three positive integers such that  $a$  and  $b$  are divisible by  $p$  then prove that  $p$  divides  $a + b$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .
- Similarly  $p$  divides  $b$  implies  $b = ps$ , for some positive integer  $s$ .
- So  $a + b = pr + ps = p(r + s)$ .
- Since  $r + s$  is a positive integer so  $p$  divides  $a + b$ .

# What is a remainder?

Let  $a, d$  be two positive integers.

If  $a$  can be written as  $dq + r$  where  $q$  and  $r$  are positive integers and  $r < d$  then  $r$  is the remainder when  $a$  is divided by  $d$ .

# What is a remainder?

Let  $a, d$  be two positive integers.

If  $a$  can be written as  $dq + r$  where  $q$  and  $r$  are positive integers and  $r < d$  then  $r$  is the remainder when  $a$  is divided by  $d$ .

In other words, if  $d$  divided  $a - r$  when  $r < d$  then  $r$  is the remainder when  $a$  is divisible by  $d$

# Modulus

If  $r$  is the remainder when  $a$  is divided by  $d$  it is represented as

$$a \equiv r \pmod{d}$$

# Modulus

If  $r$  is the remainder when  $a$  is divided by  $d$  it is represented as

$$a \equiv r \pmod{d}$$

In other words  $a \equiv r \pmod{d}$  should be read as

$d$  divides  $a - r$ .

## $b$ divides $a$ ?

If  $a, b$  are two positive integers then  $b$  divides  $a$  if  $a = bq$  for some positive integer  $q$ .

## $b$ divides $a$ ?

If  $a, b$  are two positive integers then  $b$  divides  $a$  if  $a = bq$  for some positive integer  $q$ .

If  $a, b$  are two positive integers then  $b$  does not divide  $a$  if  $a = bq + r$  for some positive integer  $q$  and  $r$ , and  $1 \leq r < b$

## Number Theory Observations: 2

If  $a, b, p$  are three positive integers such that  $a$  is divisible by  $p$  and  $b$  is not divisible by  $p$  then prove that  $p$  does not divide  $a + b$ .

## Number Theory Observations: 2

If  $a, b, p$  are three positive integers such that  $a$  is divisible by  $p$  and  $b$  is not divisible by  $p$  then prove that  $p$  does not divide  $a + b$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .

## Number Theory Observations: 2

If  $a, b, p$  are three positive integers such that  $a$  is divisible by  $p$  and  $b$  is not divisible by  $p$  then prove that  $p$  does not divide  $a + b$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .
- Similarly  $p$  does not divide  $b$  implies  $b = ps + t$ , for some positive integer  $s, t$  and  $1 \leq t < p$ .

## Number Theory Observations: 2

If  $a, b, p$  are three positive integers such that  $a$  is divisible by  $p$  and  $b$  is not divisible by  $p$  then prove that  $p$  does not divide  $a + b$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .
- Similarly  $p$  does not divide  $b$  implies  $b = ps + t$ , for some positive integer  $s, t$  and  $1 \leq t < p$ .
- So  $a + b = pr + ps + t$

## Number Theory Observations: 2

If  $a, b, p$  are three positive integers such that  $a$  is divisible by  $p$  and  $b$  is not divisible by  $p$  then prove that  $p$  does not divide  $a + b$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .
- Similarly  $p$  does not divide  $b$  implies  $b = ps + t$ , for some positive integer  $s, t$  and  $1 \leq t < p$ .
- So  $a + b = pr + ps + t = p(r + s) + t$ .

## Number Theory Observations: 2

If  $a, b, p$  are three positive integers such that  $a$  is divisible by  $p$  and  $b$  is not divisible by  $p$  then prove that  $p$  does not divide  $a + b$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .
- Similarly  $p$  does not divide  $b$  implies  $b = ps + t$ , for some positive integer  $s, t$  and  $1 \leq t < p$ .
- So  $a + b = pr + ps + t = p(r + s) + t$ .
- Since  $r + s$  is a positive integer so  $p$  divides  $(a + b) - t$ .
- Since  $1 \leq t < p$  so  $p$  does not divide  $(a + b)$

## Number Theory Observations: 3

If  $a, b, p, q$  are three positive integers such that  $a$  is divisible by  $p$  and  $b$  is divisible by  $q$  then prove that  $pq$  divides  $ab$ .

## Number Theory Observations: 3

If  $a, b, p, q$  are three positive integers such that  $a$  is divisible by  $p$  and  $b$  is divisible by  $q$  then prove that  $pq$  divides  $ab$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .

## Number Theory Observations: 3

If  $a, b, p, q$  are three positive integers such that  $a$  is divisible by  $p$  and  $b$  is divisible by  $q$  then prove that  $pq$  divides  $ab$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .
- Similarly  $q$  divides  $b$  implies  $b = qs$ , for some positive integer  $s$ .

## Number Theory Observations: 3

If  $a, b, p, q$  are three positive integers such that  $a$  is divisible by  $p$  and  $b$  is divisible by  $q$  then prove that  $pq$  divides  $ab$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .
- Similarly  $q$  divides  $b$  implies  $b = qs$ , for some positive integer  $s$ .
- So  $ab = pr \cdot qs = pq(rs)$

## Number Theory Observations: 3

If  $a, b, p, q$  are three positive integers such that  $a$  is divisible by  $p$  and  $b$  is divisible by  $q$  then prove that  $pq$  divides  $ab$ .

**Proof of the observation:**

- $p$  divides  $a$  implies  $a = pr$ , for some positive integer  $r$ .
- Similarly  $q$  divides  $b$  implies  $b = qs$ , for some positive integer  $s$ .
- So  $ab = pr \cdot qs = pq(rs)$
- So  $pq$  divides  $ab$

# Prime Numbers

A positive number  $p$  is a prime if for all  $1 < x < p$ ,  $x$  does not divide  $p$ .

# Prime Numbers

A positive number  $p$  is a prime if for all  $1 < x < p$ ,  $x$  does not divide  $p$ .

A number that is not a prime is divisible by a prime.

# Prime Numbers

A positive number  $p$  is a prime if for all  $1 < x < p$ ,  $x$  does not divide  $p$ .

A number that is not a prime is divisible by a prime.

If  $a, b$  are two integers such that  $p$  divides  $a$  but does not divide  $b$  then  $p$  does not divide  $(a + b)$ .

## Problem for next week: Problem 1

If  $a$  and  $b$  are two positive integers then prove that  $a^2 - 4b$  cannot be equal to 2.

## Problem for next week: Problem 1

If  $a$  and  $b$  are two positive integers then prove that  $a^2 - 4b$  cannot be equal to 2.

Thus we have to prove that for any positive integer  $a$

$$a^2 \not\equiv 2 \pmod{4}$$

## Problem for next week: Problem 2

Prove that the square of a prime number is always  $1 \pmod{6}$ , when the prime number is  $\geq 5$ .

Or in other words, if  $p$  is a prime number, such that  $p \geq 5$ , then  $p^2 - 1$  is divisible by 6.
