

# Nonequilibrium Statistical Mechanics - Video course

## COURSE OUTLINE

Thermal fluctuations, Langevin dynamics, Brownian motion and diffusion, Fokker-Planck equations, linear response theory, fluctuation-dissipation relations, the Boltzmann equation, critical phenomena, scaling and critical exponents.

## COURSE DETAIL

S.No	Lecture Name
1	<b>Lecture 1: Recapitulation of equilibrium statistical mechanics</b> <ul style="list-style-type: none"> <li>• Isolated system in thermal equilibrium</li> <li>• Fundamental postulate of equilibrium statistical mechanics</li> <li>• Microcanonical ensemble</li> <li>• Boltzmann's formula for the entropy</li> <li>• Connection with thermodynamics</li> <li>• Closed systems and the canonical ensemble</li> <li>• Canonical partition function</li> </ul>
2	<b>Lecture 2: The Langevin model (Part 1)</b> <ul style="list-style-type: none"> <li>• Brownian particle in a uid</li> <li>• Langevin model</li> <li>• Equation of motion including thermal noise</li> <li>• Conditional and thermal averages</li> <li>• The need to include a dissipative random force</li> </ul>
3	<b>Lecture 3: The Langevin model (Part 2)</b> <ul style="list-style-type: none"> <li>• Mean squared velocity</li> <li>• Relation between noise strength and friction: fluctuation-dissipation (FD) theorem</li> <li>• Velocity autocorrelation function</li> <li>• Stationarity of the velocity process</li> <li>• Mean squared displacement and diffusion constant</li> </ul>
4	<b>Lecture 4: The Langevin model (Part 3)</b> <ul style="list-style-type: none"> <li>• Variance of the displacement for a free Brownian particle</li> <li>• Conditional PDF of the velocity: Ornstein-Uhlenbeck (OU) distribution</li> <li>• Langevin equation (LE) for a Brownian particle in a magnetic field</li> <li>• Velocity autocorrelation tensor in a magnetic field</li> <li>• Explicit solution for the correlation tensor</li> </ul>
5	<b>Lecture 5: The Langevin model (Part 4)</b> <ul style="list-style-type: none"> <li>• Velocity correlation tensor for <math>t \geq 0</math> and <math>t \leq 0</math></li> <li>• Symmetric and antisymmetric parts of the correlation tensor</li> <li>• Diffusion tensor in a magnetic field: longitudinal and transverse parts</li> <li>• Conditional PDF of the velocity in a magnetic field: modified OU distribution</li> <li>• Linear response theory: introductory remarks</li> </ul>
6	<b>Lecture 6: Linear response theory (Part 1)</b>

NP-TEL

NPTEL

Physics

Pre-requisites:

Basics of  
equilibrium  
statistical  
mechanics

Coordinators:

**Prof. V.  
Balakrishnan**  
Department of  
Physics IIT Madras

	<ul style="list-style-type: none"> <li>• Classical and quantum equations of motion in Hamiltonian dynamics</li> <li>• Liouville operator and its hermiticity</li> <li>• Unitarity of the time evolution operator</li> <li>• Density matrix; pure and mixed states</li> <li>• Liouville and von Neumann equations for the density operator</li> <li>• Expectation value of a physical observable</li> </ul>
7	<b>Lecture 7: Linear response theory (Part 2)</b> <ul style="list-style-type: none"> <li>• Equilibrium density matrix in the canonical ensemble</li> <li>• Time dependent perturbation of a Hamiltonian system</li> <li>• First-order correction to the density operator</li> <li>• First-order correction to the mean value of an observable</li> <li>• Linear, causal, retarded response</li> <li>• Definition of the response function</li> </ul>
8	<b>Lecture 8: Linear response (Part 3)</b> <ul style="list-style-type: none"> <li>• Equivalent expressions for the response function</li> <li>• Response to a sinusoidal force and generalized susceptibility</li> <li>• Symmetry properties of the frequency-dependent susceptibility</li> <li>• Double-time retarded Green function</li> <li>• Spectral function and its relation to the generalized susceptibility</li> </ul>
9	<b>Lecture 9: Linear response(Part 4)</b> <ul style="list-style-type: none"> <li>• Susceptibility for an oscillator in a fluid</li> <li>• Poles of the oscillator susceptibility in the complex frequency plane</li> <li>• Simplification of the general expression for the response function</li> <li>• Simplified expression in the classical case</li> <li>• Kubo canonical correlation in the quantum mechanical case</li> </ul>
10	<b>Lecture 10: Linear response (Part 5)</b> <ul style="list-style-type: none"> <li>• Canonical correlation functions</li> <li>• Response function as a canonical correlation</li> <li>• Properties of canonical correlations: stationarity, symmetry and reality</li> <li>• Physical implication of reality property</li> <li>• Analyticity of the susceptibility in the upper half frequency plane</li> </ul>
11	<b>Lecture 11: Linear response (Part 6)</b> <ul style="list-style-type: none"> <li>• Dispersion relations for the real and imaginary parts of the susceptibility</li> <li>• Asymptotic behavior of the susceptibility and subtracted dispersion relations</li> <li>• Case of a singular DC susceptibility</li> <li>• Response function in terms of matrix elements of observables</li> <li>• Susceptibility in terms of transition frequencies</li> </ul>
12	<b>Lecture 12: Linear response theory (Part 7)</b> <ul style="list-style-type: none"> <li>• Spectral function in terms of the transition frequencies of a system</li> <li>• Master analytic function from the spectral function</li> <li>• Boundary values of the master function: Retarded and advanced susceptibilities</li> <li>• Fourier representation of two-time correlation functions</li> <li>• Fourier representation of two-time anticommutator</li> </ul>
13	<b>Lecture 13: Quiz 1 - Questions and answers</b>
14	<b>Lecture 14: Linear response theory (Part 8)</b> <ul style="list-style-type: none"> <li>• Symmetry or antisymmetry of the response function under time-reversal</li> <li>• Spectral function as the real or imaginary part of the susceptibility</li> <li>• Equilibrium averages of equal-time commutators and moments of the spectral function</li> <li>• High-frequency expansion of the susceptibility</li> </ul>
15	<b>Lecture 15: Linear response theory (Part 9)</b>

	<ul style="list-style-type: none"> <li>• Derivation of the response in the Heisenberg picture</li> <li>• Differential and integral equations for the time-development operator</li> <li>• Solution to first order in the perturbation</li> <li>• Expression for the response function</li> <li>• General relation between power spectra of the response and fluctuations</li> </ul>
16	<p><b>Lecture 16: The dynamic mobility</b></p> <ul style="list-style-type: none"> <li>• Definition of the mobility of a Brownian particle</li> <li>• Zero-frequency mobility and diffusion constant</li> <li>• Dynamic mobility as a generalized susceptibility</li> <li>• Consistency of the Langevin model with linear response theory</li> <li>• Non-diffusive behaviour of a Brownian oscillator</li> </ul>
17	<p><b>Lecture 17: Fokker-Planck equations (Part 1)</b></p> <ul style="list-style-type: none"> <li>• Langevin equation (LE) for a general diffusion process</li> <li>• Corresponding Fokker-Planck equation (FPE) for the conditional PDF</li> <li>• Case of linear drift and constant diffusion coefficients</li> <li>• Examples: FPE for the velocity PDF, diffusion equation for the positional PDF</li> <li>• FPE for the phase space PDF of a Brownian particle</li> <li>• Generalization to three dimensions</li> </ul>
18	<p><b>Lecture 18: Fokker-Planck equations (Part 2)</b></p> <ul style="list-style-type: none"> <li>• FPE for general (nonlinear) drift and diffusion coefficients in the multi-dimensional case</li> <li>• Kramers' equation for phase space PDF in an applied potential</li> <li>• Asymptotic form of the phase space PDF</li> <li>• Diffusion regime (or high-friction limit): Smoluchowski equation for the positional PDF</li> <li>• Overdamped oscillator: OU distribution for the positional PDF</li> </ul>
19	<p><b>Lecture 19: Fokker-Planck equations (Part 3)</b></p> <ul style="list-style-type: none"> <li>• Stationary solution of the Smoluchowski equation</li> <li>• Thermally-assisted escape over a potential barrier</li> <li>• Kramers' escape rate formula</li> <li>• Diffusion in a constant force field: sedimentation</li> </ul>
20	<p><b>Lecture 20: The generalized Langevin equation (Part 1)</b></p> <ul style="list-style-type: none"> <li>• Inconsistency in the Langevin model: non-stationarity of the velocity</li> <li>• Divergence of mean squared acceleration</li> <li>• Generalized Langevin equation and memory kernel</li> <li>• Frequency-dependent friction</li> <li>• Dynamic mobility in the generalized model</li> </ul>
21	<p><b>Lecture 21: The generalized Langevin equation (Part 2)</b></p> <ul style="list-style-type: none"> <li>• Kubo-Green formula for the mobility: first FD theorem</li> <li>• Consistency of the model with stationarity and causality</li> <li>• Cross-correlation between the noise and the velocity</li> <li>• Relation between noise autocorrelation and memory kernel: second FD theorem</li> </ul>
22	<p><b>Lecture 22: Diffusion in a magnetic field</b></p> <ul style="list-style-type: none"> <li>• Langevin equations for position and velocity with a velocity-dependent force</li> <li>• Smoluchowski equation for positional PDF</li> <li>• Identification and calculation of the diffusion tensor</li> <li>• FPE for the radial distance PDF in Brownian motion</li> <li>• Corresponding LE with a drift term for the radial distance</li> </ul>
23	<p><b>Lecture 23: The Boltzmann equation for a dilute gas (Part 1)</b></p> <ul style="list-style-type: none"> <li>• Single-particle phase space</li> </ul>

	<ul style="list-style-type: none"> <li>• Equation for number density in the absence of collisions</li> <li>• Binary collisions and two-particle scattering</li> <li>• The collision integral</li> <li>• The Boltzmann equation</li> </ul>
24	<b>Lecture 24: The Boltzmann equation for a dilute gas (Part 2)</b> <ul style="list-style-type: none"> <li>• The equilibrium distribution: sufficiency condition</li> <li>• Boltzmann's <math>H</math>-Theorem</li> <li>• The equilibrium distribution: necessary condition</li> <li>• The Maxwell-Boltzmann distribution</li> <li>• Equilibrium distribution in a potential</li> </ul>
25	<b>Lecture 25: The Boltzmann equation for a dilute gas (Part 3)</b> <ul style="list-style-type: none"> <li>• Remarks on the <math>H</math>-Theorem</li> <li>• Detailed balance and equilibrium distribution</li> <li>• Collision invariants and equations of continuity</li> <li>• Linearization of the Boltzmann equation close to equilibrium</li> </ul>
26	<b>Lecture 26: The Boltzmann equation for a dilute gas (Part 4)</b> <ul style="list-style-type: none"> <li>• Single relaxation time approximation to the collision integral</li> <li>• Relaxation of the velocity</li> <li>• Equivalence to a Kubo-Anderson Markov process</li> <li>• Relaxation of a non-uniform distribution in the position variable</li> </ul>
27	<b>Lecture 27: The Boltzmann equation for a dilute gas (Part 5)</b> <ul style="list-style-type: none"> <li>• Relaxation of a non-uniform gas</li> <li>• Frequency-dependent diffusion coefficient</li> <li>• The diffusion constant</li> <li>• Shift of the equilibrium velocity distribution under a uniform force</li> </ul>
28	<b>Lecture 28: Quiz 2 - Questions and answers</b>
29	<b>Lecture 29: Critical phenomena (Part 1)</b> <ul style="list-style-type: none"> <li>• Recapitulation of thermodynamics</li> <li>• Intensive and extensive variables</li> <li>• Phase diagram for a single component substance</li> <li>• Liquid-gas coexistence line and the critical point</li> </ul>
30	<b>Lecture 30: Critical phenomena (Part 2)</b> <ul style="list-style-type: none"> <li>• Extensivity of thermodynamic potentials</li> <li>• Some convexity properties of thermodynamic potentials</li> <li>• Divergence of specific heat at the critical point</li> <li>• Simplest magnetic equation of state</li> <li>• Fluid-magnet analogy</li> </ul>
31	<b>Lecture 31: Critical phenomena (Part 3)</b> <ul style="list-style-type: none"> <li>• Fluid-magnet analogy (contd.): phase diagrams</li> <li>• Ising model with nearest-neighbour interaction</li> <li>• Mean field theory (MFT) for the Ising model</li> <li>• Critical temperature in MFT</li> <li>• Critical exponents in MFT</li> </ul>
32	<b>Lecture 32: Critical phenomena (Part 4)</b> <ul style="list-style-type: none"> <li>• Definition of specific heat, order parameter, susceptibility and critical isotherm exponents</li> <li>• Difference between actual and MFT values of critical exponents</li> <li>• Static susceptibility formula</li> <li>• Correlation length</li> <li>• Critical exponent for the divergence of the correlation length</li> </ul>

33	<b>Lecture 33: Critical phenomena (Part 5)</b> <ul style="list-style-type: none"> <li>• Equation of state in the Ising model</li> <li>• Magnetization versus magnetic field for different temperatures</li> <li>• Landau expansion for the free energy</li> <li>• Criterion for the validity of MFT</li> <li>• Upper critical dimensionality in the Ising universality class</li> </ul>
34	<b>Lecture 34: Critical phenomena (Part 6)</b> <ul style="list-style-type: none"> <li>• Scaling functions</li> <li>• Relations between critical exponents</li> <li>• Landau free energy functional</li> <li>• Equilibrium configuration of the order parameter</li> <li>• Relaxation to equilibrium configuration</li> </ul>
35	<b>Lecture 35: Critical phenomena (Part 7)</b> <ul style="list-style-type: none"> <li>• Time-dependent Landau-Ginzburg equation</li> <li>• Langevin equation for the order parameter</li> <li>• Fokker-Planck equation for configuration probability</li> <li>• Linearized LE and relaxation to equilibrium</li> <li>• Critical slowing down</li> <li>• Dynamic scaling hypothesis</li> </ul>
36	<b>Lecture 36: The Wiener process (standard Brownian motion)</b> <ul style="list-style-type: none"> <li>• The Wiener process (standard Brownian motion)</li> <li>• Sample path properties</li> <li>• Iterated logarithm law and arcsine law</li> <li>• Functionals of the Wiener process</li> <li>• Itô calculus: basic rules</li> <li>• The Feynman-Kac formula and generalizations</li> </ul>
